

### **A Message to All Second Year Students:**

Welcome to the second year cardiology student module. We hope you find this module fun and exciting. It is a very clinically based, patient oriented class. Our goal is to help you to translate book knowledge into clinical practice. I cannot stress enough the need to attend all classes. A lot of what you will be taught is by discussion and visualization with echoes, x-rays and cardiac catheterization films. This cannot be transcribed. We encourage interaction.

The exam is case based and will come from the lectures and handouts. This means, the exam may be on **INFORMATION** and not directly lectured on. Understanding **THE CONCEPT IS THE KEY**. Patients—do not read books.

Lastly, **most** of the lectures can be found on our website, [www.sjhq.org](http://www.sjhq.org). Please refer to the student module tab on the left side of the page. Under the site are most of the lectures in Power Point format.

We look forward to a great module. If you have any questions call Kate Jurman at 856-755-1173 or email at [cardiologyfellowship@sjhq.org](mailto:cardiologyfellowship@sjhq.org).

**Sincerely,**

**John Hamaty, D.O., FACC, FACOI  
Course Director**
